StreamFlow Finance

A platform for streaming payments

**Streams**. The locked payment is progressively unlocked over time

Trustless & verifiable. Software is free and open-source and everyone can see what's going on

Decentralized & immutable. No central server to fail, no middle man to manipulate transactions.
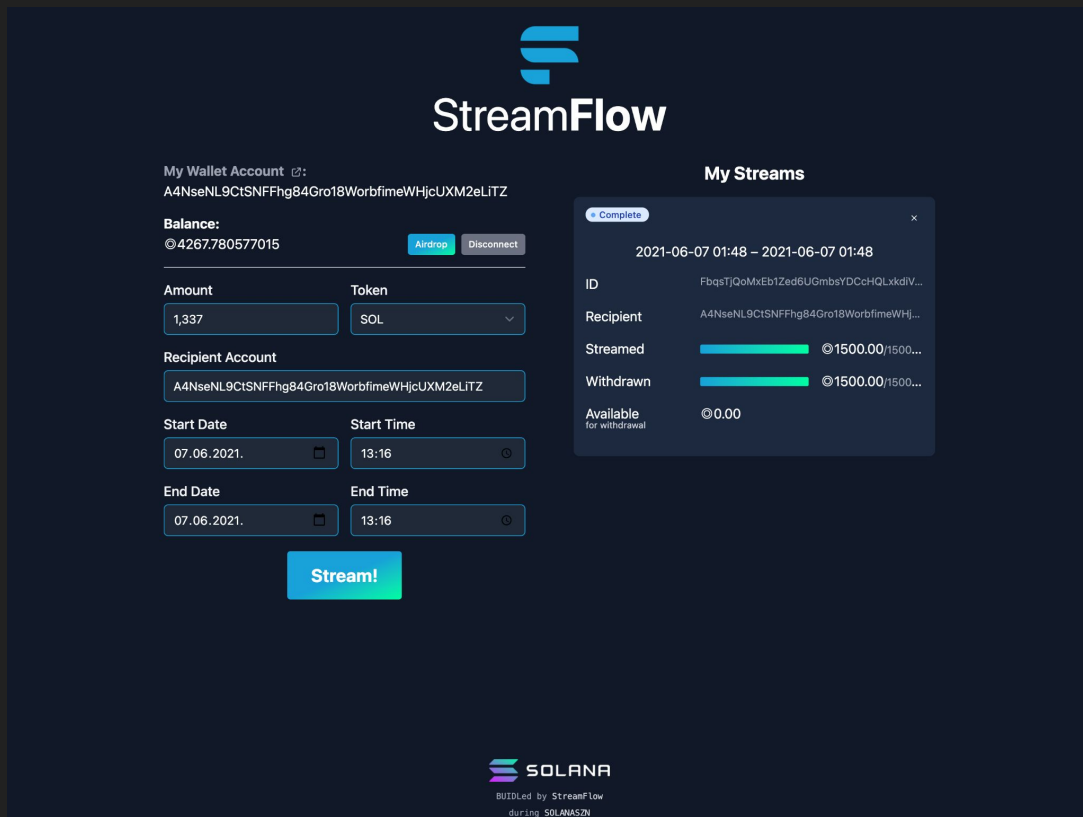

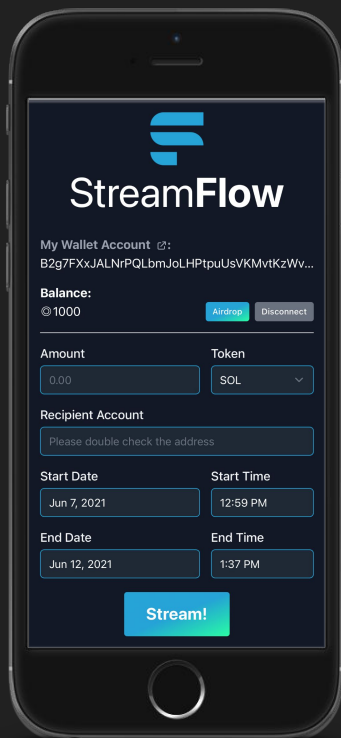

Real-time. Built on Solana where ultra-cheap transactions are confirmed in less than a second

Serverless. We don't hold any data, it's all in the web application and on chain

Platform overview

Demo

Use cases

Payrolls

Especially if the trust between the parties is not yet established

Vesting

Ideal use case, with minor alterations (cliff and time-step)

Services billed per time unit

Consulting, live events/concerts, audio/video content (pay only for the time spent consuming the content), bike renting or even parking!

Fundraising & donations

Donors can create streams to support the cause and **cancel** their support at any given moment.

...and probably many other.

Growth & Monetization

Integration is key.

Growth

Integration with:

- Wallet providers
- Swaps
- Payroll solutions
  - like Deel (letsdeel.com), potentially getting exposure to non-crypto market

Monetization

- Lending locked funds
- Integration with swaps and onramps
- Service fees
  - Charged per transaction
  - e.g. Solana account rent collection after the last withdrawal

Roadmap & Vision

- SPL tokens support

- ERC-20 tokens support (via Wormhole)

- Integration with other wallets

- Vesting (essentially a custom streaming schedule)

- Integration with borrow/lend protocols

- Integration with swaps

- **Embeddable widget for others to use**

- *(potentially)* Integration with Deel (letsdeel.com) or similar platforms

Thank you!

Money streams. Money flows.
